

**Syllabus**  
**Junior Cyber Security Associate**

S No.	NOS/Module Name	Topics	Duration (Hours)		Learning Outcomes
			Theory	Lab	
1	Fundamentals of Network and Operating System	<ul style="list-style-type: none"> <li>Basic networking concepts including IP addressing, routing, and protocols</li> <li>Principles of operating systems – file management, system processes, user interfaces</li> <li>Network devices – routers, switches, firewalls and their interactions</li> <li>Network settings configuration and troubleshooting</li> <li>Operating system management, updates and system security</li> </ul>	30	60	<ul style="list-style-type: none"> <li>Acquire knowledge of basic networking concepts, including IP addressing, routing, and network protocols.</li> <li>Learn the principles of operating systems, such as file management, system processes, and user interfaces.</li> <li>Understand how different network devices (routers, switches, firewalls) interact within a network.</li> <li>Gain practical skills in configuring network settings and troubleshooting common networking issues.</li> <li>Develop the ability to manage operating system settings, perform system updates, and ensure system security.</li> </ul>

2	Fundamentals of Cyber Security	<ul style="list-style-type: none"> <li>• Cybersecurity concepts – threats, vulnerabilities, and protocols</li> <li>• Data protection – encryption, access control, secure storage</li> <li>• Role of security tools – firewalls, IDS/IPS, antivirus</li> <li>• User authentication and access control</li> <li>• Cyber threat identification and mitigation</li> </ul>	50	100	<ul style="list-style-type: none"> <li>• Acquire knowledge of key cybersecurity concepts, including threats, vulnerabilities, and security protocols.</li> <li>• Learn the importance of data protection strategies, such as encryption, access controls, and secure storage.</li> <li>• Understand the role of firewalls, intrusion detection/prevention systems, and antivirus software in defending against cyber-attacks.</li> <li>• Gain practical skills in implementing security measures such as secure authentication, authorization, and user access controls.</li> <li>• Develop the ability to identify common cyber threats, including malware, phishing, and denial-of-service attacks, and understand techniques for mitigating them.</li> </ul>
---	--------------------------------	--	----	-----	---

3	Cryptography and Ethical Hacking	<ul style="list-style-type: none"> <li>• Cryptographic algorithms and applications</li> <li>• Symmetric and asymmetric encryption technique</li> <li>• Ethical hacking methodologies and tools</li> <li>• Penetration testing and system vulnerability assessment</li> <li>• Public Key Infrastructure and digital certificates</li> </ul>	25	35	<ul style="list-style-type: none"> <li>• Develop a thorough understanding of cryptographic algorithms, their applications, and their role in securing communication.</li> <li>• Learn how to implement various encryption and decryption techniques, including symmetric and asymmetric cryptography, in real-world scenarios.</li> <li>• Understand ethical hacking methodologies and tools used to identify and exploit vulnerabilities in network systems.</li> <li>• Gain practical experience in securing data using cryptographic techniques and conducting penetration testing to assess system vulnerabilities.</li> <li>• Demonstrate the ability to use cryptographic protocols and ethical hacking tools to evaluate and strengthen system security.</li> </ul>
4	Network and Infrastructure Security	<ul style="list-style-type: none"> <li>• Network security concepts – firewalls, IDS/IPS</li> <li>• Configuring network security devices</li> <li>• Secure network architecture and communication protocols</li> <li>• Mitigating common network attacks</li> <li>• Network monitoring and traffic analysis</li> </ul>	15	15	<ul style="list-style-type: none"> <li>• Acquire a comprehensive understanding of network security concepts, including firewalls, intrusion detection systems (IDS), and intrusion prevention systems (IPS).</li> <li>• Learn how to implement and configure network security devices to protect networks from unauthorized access and cyber threats.</li> <li>• Understand the principles of securing network protocols, such as TCP/IP, and how to protect against common network vulnerabilities.</li> <li>• Gain expertise in deploying security measures such as VPNs, network segmentation, and secure wireless configurations to enhance infrastructure security.</li> <li>• Demonstrate the ability to monitor and analyze network traffic to detect and respond to security incidents, ensuring the integrity and confidentiality of network data</li> </ul>

<b>Sub Total = 330 hours</b>		120	210	
5	Employability Skills	60		Students will be able to get the additional skills apart from the technical skills, to be job ready
6	OJT/Project	60		Students will be able to learn the working in a job.
<b>Total Duration</b>		<b>450</b>
